**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** Location; Township 28S Range 35E Section SE 1/4 30 ; Latitude N59 degrees 32.671, Longitude W139 degrees 32.036 (NAD27). Stream is number 14 on the map.

Stream characteristics: Width .3 - .5 m, depth .2 - .3 m. Substrate sand and organics gravel. Good rearing habitat - muskeg/wetlands with some tannic coloration. Temp 9 degrees C.

Stream surveys were part of the Yakutat Fish Habitat and ATV Trail Assessment project. Field crews surveyed streams for fish using baited minnow traps. Soak times for traps were usually less than 30 minutes per trap/ two traps per sample site. Captured fish were identified and released on-site. Field teams were comprised of ADF&G and Yakutat Ranger District personnel.

Name of Observer (please print): Phil Mooney  
Signature: ALASKA DEPT. OF FISH AND GAME  
Address: 304 LAKE ST. ROOM 103  
SITKA, AK 99835-7563

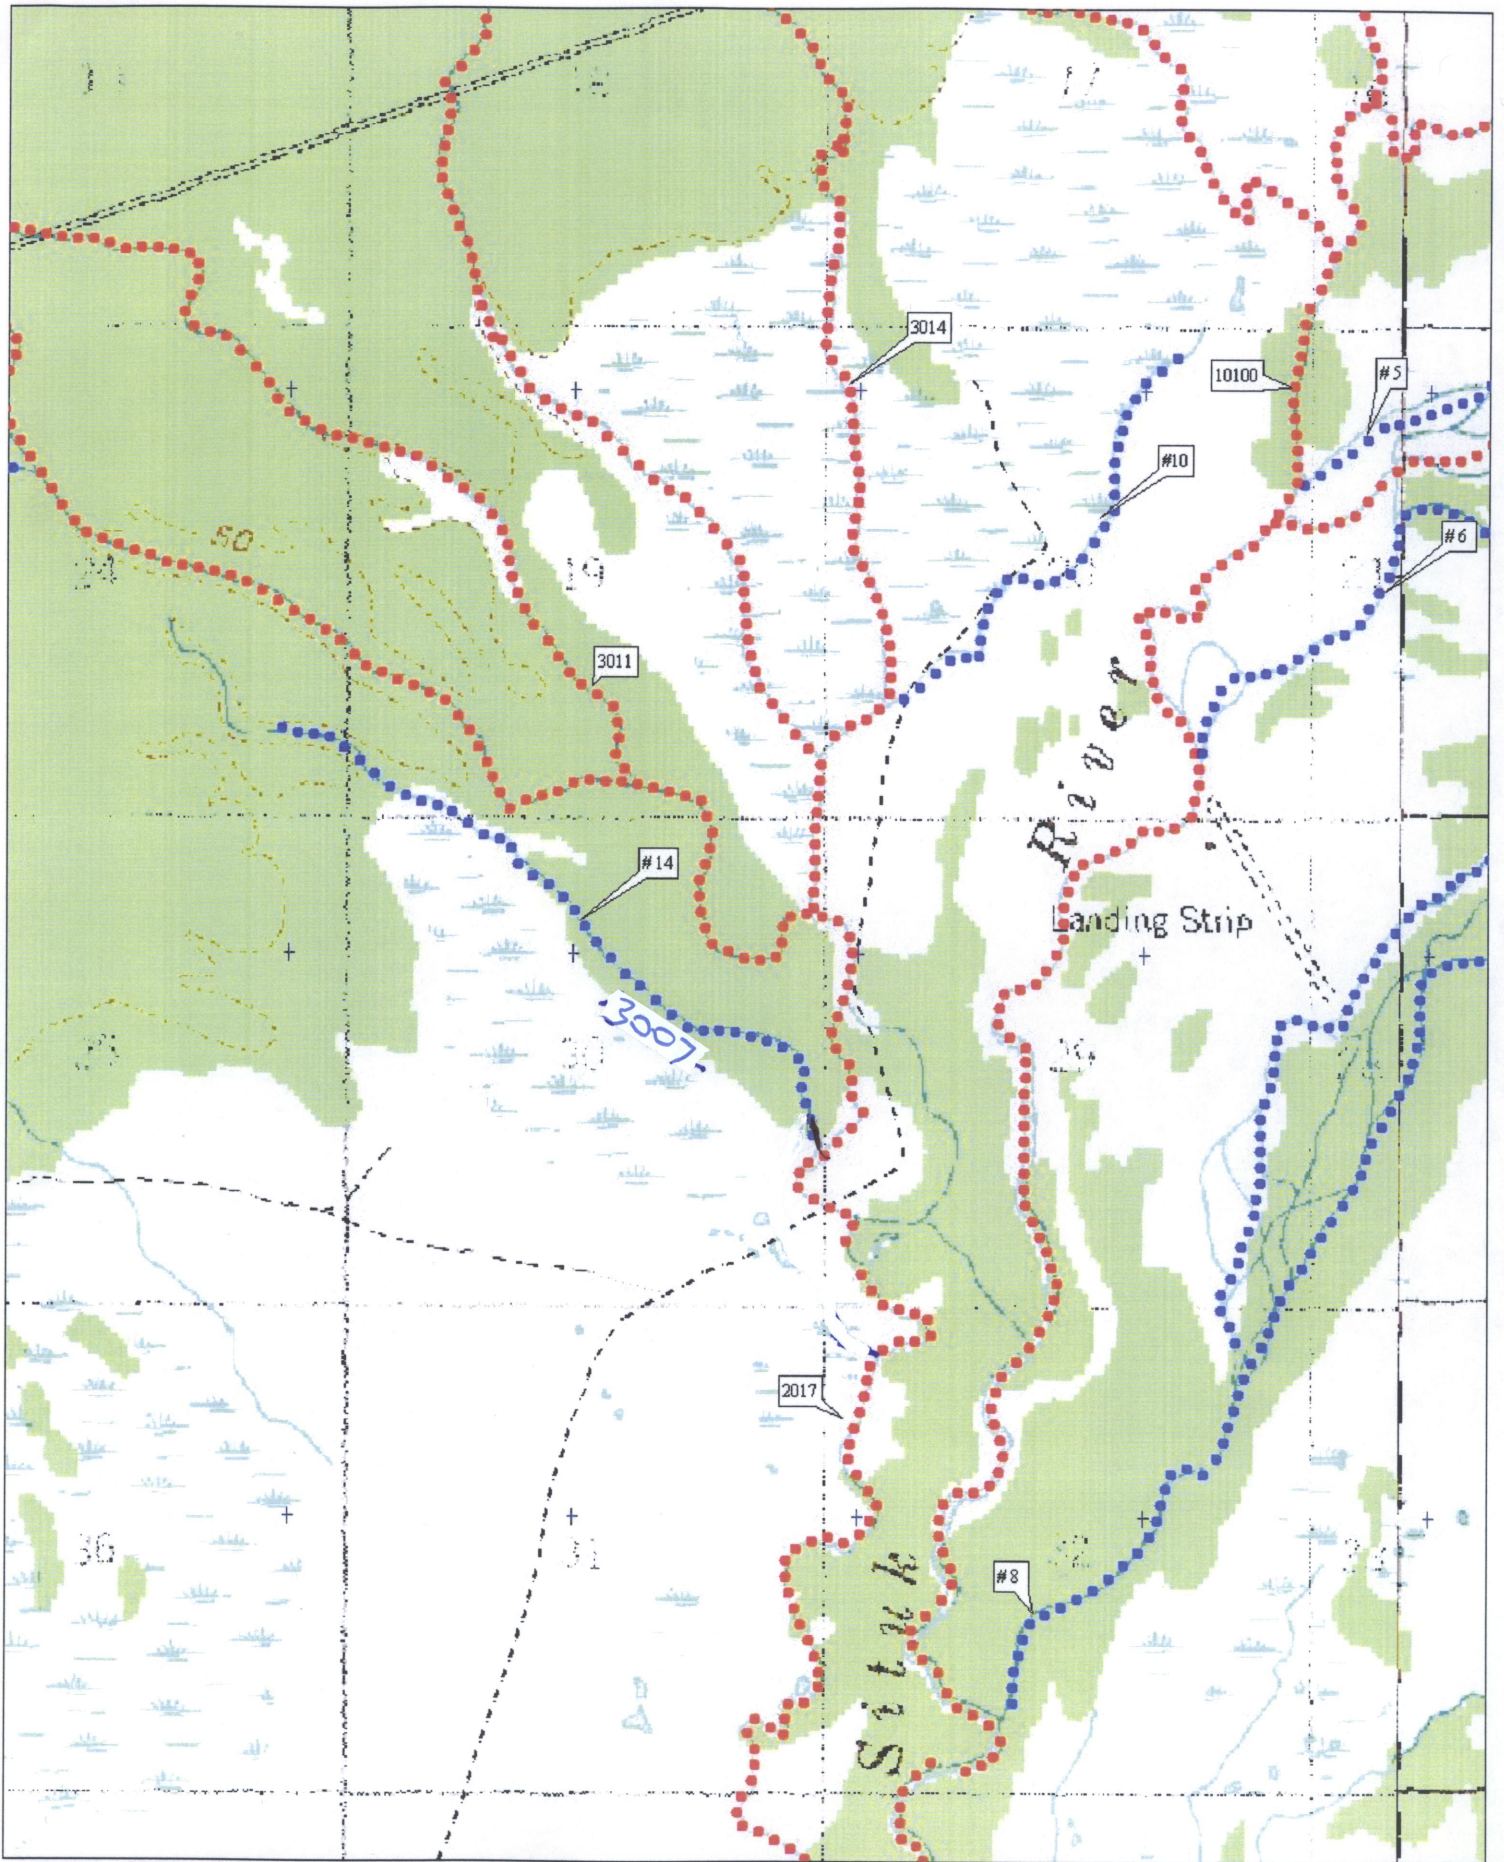

Date: 6/30/2001

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: Phil Mooney
